

MANA AND ARTIFICE ADD-ON

Forgotten Cantrips

June 28, 2026

1. Project Context & Stakeholders

| The Problem & Solution

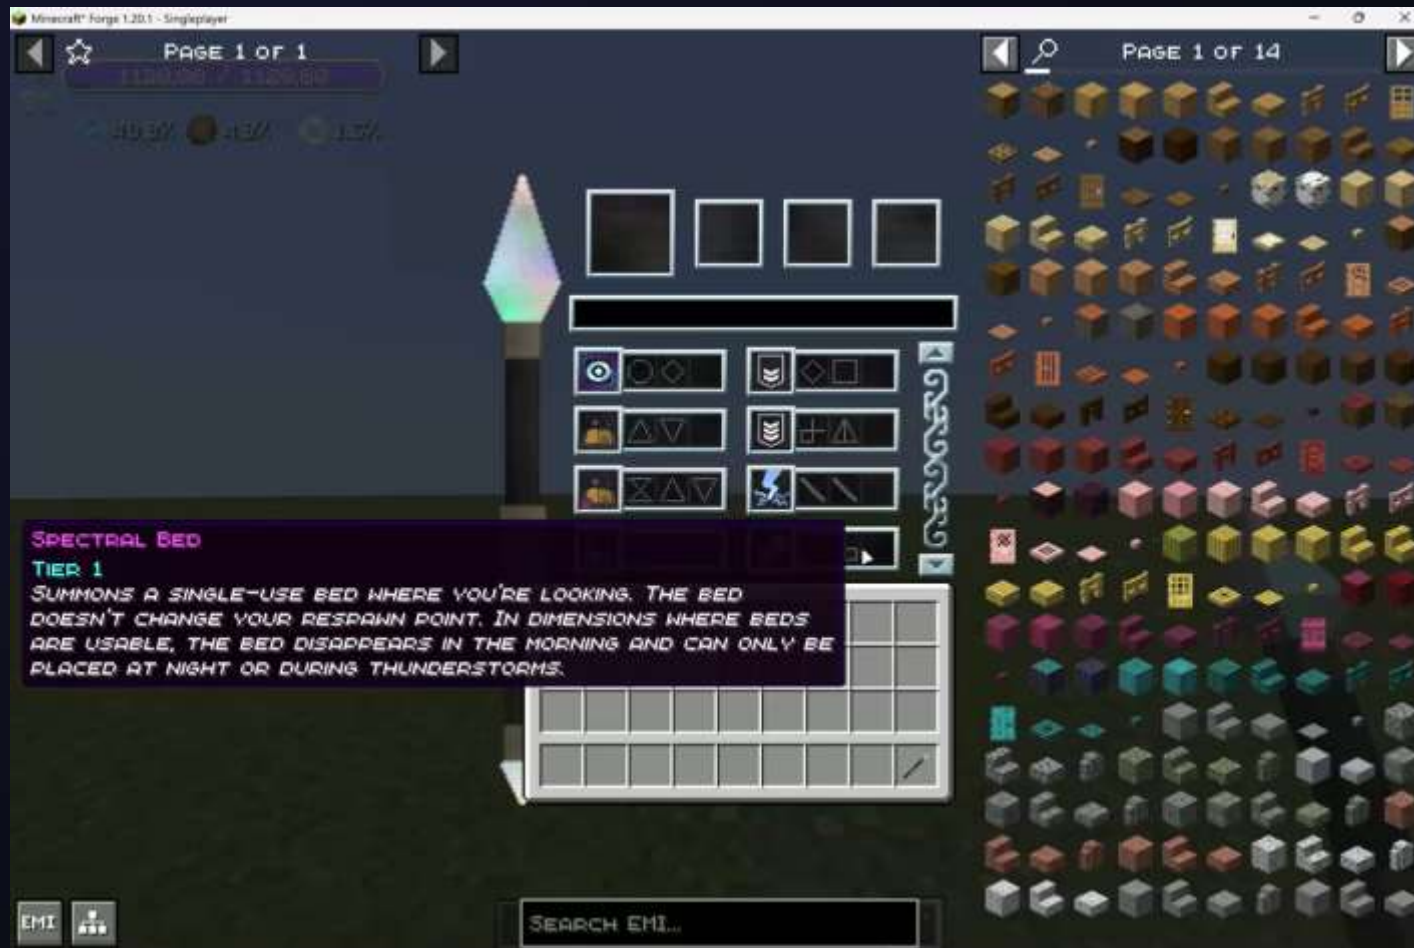

The Problem: Mana and Artifice is the go-to magic mod, but its most unique feature—cantrips—is seriously lacking options.

The Solution: *Forgotten Cantrips* expands the "Mana & Artifice" system with tier-gated tools (Spectral Donkey, Spectral Boat, Empower).

| Key Stakeholders

👥 **End-Users:** Mana and Artifice players

2. Demo video

Team roles and contributions

Team Member	Development Role	Primary Sprint Deliverables
ultradood	Lead Gameplay Engineer	Developed Spectral Donkey
alexm-gh	Technical Artist & Asset Designer	Developed Force Consume cantrip
notwindstone	CI Developer, Asset Designer	Cantrip Assets
Dima280807	Developer	Spectral Boat fixes, Empower cantrip
dtamindarov5839	Developer	Fixed bugs in different cantrip use scenarios
l1n0n	Team Lead	Set up Git workflow, structured mod documentation.

Requirements: Functionality and Quality

✔ Core Priority: Spells

Implementation of 3 specific User Stories: [Spectral Bed](#) (US-003), [Lightning strikes](#) (US-004), and [Spectral Boat](#) (US-006).

🕒 Performance

Beds, boats and donkeys must automatically disappear after some time. To not lag the server, the efficient solutions had to be implemented. The mod installed does not increase startup time

📦 Entity Persistence

Items placed inside the summoned entity must be written to player NBT storage files to prevent player items from duplicating or disappearing.

🛡 Reliability Quality

Standard Minecraft sandbox compatibility checks verify that items are stored securely across multiplayer world transitions without desync.

Project Development Roadmap

Client Collaboration & Challenges

| Active Collaboration & Feedback

The community is actively playtesting the addon via the open beta release and providing the team valuable feature requests. Recent customer interview and playtesting session yielded valuable insights. However, the customer noted that the learning system requires refinement to discourage players from brute-forcing spell combinations.

| Current Technical Challenges

While we have not encountered any Technical roadblocks so far, our primary focus and challenge lies in designing the Learning system. Additionally, conceptualizing new cantrip ideas remains a creative challenge.
